Portfolio

ussac.us/

USSAC - 2012

United States Soldiers Assistance Center, USSAC, is a place of hope for millions of heroes returning from war and facing life's challenges.

USSAC uses a MySQL backend and has credit card authorization through [Authorize.net](#).

smart2click.com/

Smart2Click - 2011

Search.Click.Save is a coupon and savings site.

It is built in PHP and uses a MySQL backend. It has an administrative area where the site owner can upload images and make changes to the website.

johnmuir-elementary.com

John Muir Elementary - 2011

The site for John Muir Elementary came live in January, 2011, when the Principal finally decided to have a web site. The site uses PHP and MySQL with a back end so that school staff is able to update it without my help.

linglingdayspa.com

Ling Ling Day Spa - 2010

The Ling Ling Day Spa is at the home of the owner. The site will enable clients to make an appointment for a massage. It is done in PHP and MySQL.

woodtoneproduct.com

WoodTone Product - 2010

Whether you are Julia Child reincarnated or if Gordon Ramsey just ran out screaming, we are here to help you.

Software

Microsoft Office Products, HTML-Kit Tools, Top Style, Photoshop, Microsoft Server, Microsoft Exchange, Microsoft IIS

Technologies and Languages

ASP Classic, PHP, Microsoft SQL, MySQL, Word Press templates

Experience

Hal Computers 1999 - 2001

Hal Computers was a computer repair shop in Glendale. I cleaned viruses from customer's computers, and taught customers how to use the software on their computer. I also helped the owner with accounting and other clerical duties.

nextBlock.com 2001 - Present

I was originally hired to give the site better search engine results. I learned ASP Classic, and Microsoft SQL, then completely redid the site. When the server admin moved to a new company, I became the server admin. I administer the web server, db server, exchange server, and implement security for the servers and work stations.

Freelance 1998 - Present

The sites in the portfolio shown are only a few. Some of the sites I have done are no longer on the Internet as the business has closed, or the owner decided to not have a web presence. I can provide files and samples for all those sites.

Accolades

Neredbojias (*alt.html*)

"I looked at Adrienne B.'s latest page (...problems with Flash rendering) and must say I was impressed. Simple - functional - attractive. Good commercial effort."

rf (*alt.html*)

"I always enjoy looking at Adrienne's pages. They give me inspiration."

Big Bill (*alt.internet.search-engines*)

"I'll leave that to Adrienne since she seems to be running the show now. And perfectly capable she is too."

Major Nancy T. (*nextBlock.com*)

"I love getting your email [buzz] especially since I just got back from Iraq. I also enjoyed having it in my email when I was in Iraq - morale booster."

Adrienne Boswell - 2009

My personal web site that has a continuously evolving scrap book for my son, Spane.

The site is done in PHP with MySQL back end.

adrienneboswell.com

Counter Top Pros - 2009

This site was one of several for another home remodeling professional. Although the business was the same, each site had to have unique content.

The site was done in PHP with MySQL back end.

countertoppros.com

Caesar Stone Pros - 2009

Another site for the home remodeling professional. This site was for a particular type of counter top, CaesarStone, where the visitor would want to see realistic representations of the various counter tops. The site also had to have a unique style unlike the other sites for this owner, or other vendors using this product.

The site was done in PHP with MySQL back end.

caesarstonepros.com

Josef Rotter - 2009

This is the personal web site of the founder of American Loyalty Card. It is done in PHP with MySQL.

josefrotter.com

Kitchen Builders - 2009

The flagship site of the home remodeler. This was mostly a redo website. The original web site was HTML only with no database backend. I put everything into a MySQL database, cleaned up the code, and made it much more friendly to search engines. It is also written in PHP.

kitchenbuilders.net

Lili Dauphin - 2009

An author's web site to promote her books, and link to on-line stores carrying the books. This site was particularly problematic because of hosting limitations, eg. inability to use .htaccess, and an old, insecure version of PHP. Because of this, I had to be extra careful to make sure **everything** sent to the server was clean.

The site's theme is based on an existing painting of the author, and all colors were chosen by the author. The site is written in PHP with MySQL.
